

# ENVIRONMENTAL CONSULTANCY

## Introduction

Nowadays, most organisations have to consider the environmental factor in their overall strategy. This results from a general awareness growing as well as from the development of environmental legislation becoming more and more complex and inducing new costs.

VAN DIJK MANAGEMENT CONSULTANTS has more than 25 years experience as consultants in the fields of energy and environment, information technologies and research and development services. It answers the needs of companies and organisations by offering highly professional services backed by expertise in all facets of strategy, management and organisation.

Our clients are public and private companies as well as institutions such as the European Commission, state and regional authorities, community and inter-community administrations. Our approach takes always into account the missions, tasks and specific background of the client.

The quality of our approach is furthermore ensured by the application of an internal manual, developed for our ISO 9001 certification.

## Services offered

To assist organisations to take up the environmental challenges, VAN DIJK MANAGEMENT CONSULTANTS has a multidisciplinary team of experts and offers the following services:

### ➤ *Analysis of the needs*

- Consideration of the environmental constraints and opportunities during the development of projects.
- Market studies of products and services related to the environment.
- Environmental audits and diagnostics.

- Feasibility studies of investments in installations and facilities.

### ➤ *Studies and surveys*

- Studies of the socio-economic impacts and financial aspects of the environmental factor.
- Studies of issues linking energy and environment.
- Sectorial studies using European or worldwide benchmarking methods.

### ➤ *Management and the environment*

- Strategy, management and organisation of the structures by integrating the environmental aspect.
- Implementation of action programmes and writing-up of procedures (monitoring and reporting).

### ➤ *Assessment and management of environmental research programmes*

- Impact studies on short or long-term programmes and research projects.
- Management of research projects and monitoring of externalised research.

### ➤ *Information and training*

- Collection of data related to the environment (standards, legislation, technical documents, reports and studies).
- Organisation of information on environment (databases, library and archive management).
- Knowledge and content management.
- Strategic monitoring (monitoring of the technological and regulatory evolution of the environmental field).
- Training of personnel with regard to environment-related communication.
